Applications

Easy Administration

Easy and quick management of small events like board room meetings, small seminars etc. Quick site deployment using a site look from existing templates. Quick contact searches and integrated email management.

Brand Building:

Build the event brand by maximally using event theme, logo and color in all correspondence and online presence. Make all communication uniform and template based. Use other sites to gain exposure for an upcoming event.

Contact generation:

Network with your existing clients, exhibitors, sponsors and vendors using a common interface. Maximise reference and contact generation by offering incentives online and otherwise. Tap the website fully to generate new contacts

Online Advantage

Use online platform as a potent tool for maximising collaboration and user convenience by offering a range of features like online registration, personalized accounts, communication etc. Minimize spend on paper based correspondence

Personalize communication

Personalize communication with your use and offer them custom information rather than generic information. Offer attractive benefits to frequent visitors. Save their time by allowing them to access and print their information at their convenience

Consolidated data

Create and consolidate a single focal database for all event related information. Useful data can be quickly accessed using fast searches. User profile based access to restrict data view. Remote data access features

Architecture

Completevent Enterprise uses web based architecture for deployment. It is hosted on dedicated servers. Such infrastructure is readily available with various hosting vendors. There are no complicated infrastructure and server configuration requirements making the application simple to deploy.

Completevent is built using Microsoft's .Net framework with full 64-bit support for both the x64 and the IA64 hardware platforms. This framework allows tight web services based integration. Custom desktop compatible plug-ins of the solution can be easily developed using .Net framework.

MSSQL 2005 database server delivers a more secure and reliable data management and analysis platform. With higher availability (99.999%) for mission critical applications and five times faster failover, it is the best technology option for event data storage. Reducing development time by up to 35 percent not only decreases the cost of applications, it also helps companies stay ahead of their competition.

Completevent Security

Completevent Enterprise employs comprehensive and inbuilt security architecture. A 128 bit encryption of all transmitted data is offered to ensure that all monetary transactions taking place are safe from hackers and other security threats. The administration interface has a range of authentication methods to ensure that only select users have access to event data. Further access levels can be added on to ensure maximal security to mission critical data. IP encryption is another method that is offered to allow safe remote access.
